BASED IN
Istanbul, Turkiye

OPEN TO
On-site, hybrid or fully remote —
and to relocation for international
roles.

CORE SKILLS

Product design

Interaction design · Information
architecture · User flows ·
Wireframing · High-fidelity UI ·
Prototyping · Responsive & mobile

Design systems

Component libraries · Semantic
design tokens · Multi-brand
theming · Light/dark modes ·
Documentation & governance

Accessibility

WCAG 2.2 AA contrast audits ·
Focus & keyboard states ·
Inclusive form and error design

Collaboration

Requirement gathering ·
Stakeholder alignment · Design-
dev handoff · Revision cycle
management

TOOLS

Figma (Auto Layout, Variables,
Tokens Studio) · Adobe XD · Miro ·
Zeplin · Illustrator · Photoshop ·
HTML & CSS

PROFILE

UI/UX designer with **7+ years** designing products people have to get right the first time — a national deposit-return system, a cross-border health platform, e-commerce for household-name brands. My **computer engineering** background means I design in systems rather than screens, and I hand developers work they can build without guessing.

EXPERIENCE

Atlastek / DIAS Group

09/2022 – 08/2025

Senior UX/UI Designer · Istanbul

Deposit Return System (DYS) — Turkiye's national recycling ecosystem

- **Owned end-to-end design** for a national-scale ecosystem spanning a consumer mobile app, physical deposit-machine screens, and stakeholder dashboards — one product family, three very different contexts of use.
- Designed the **deposit machine flow** (scan → verify → instant refund) for first-time users standing in public with no instructions, stripping the interaction down to a single guided path and reducing failed deposits in field testing.
- Built **permission-based dashboards** for TÜÇA (Turkish Environment Agency), Darphane (Turkish State Mint) and operators, turning financial flows, device health and rule engines into views non-technical stakeholders could act on daily.
- Established the **shared component library and design tokens** across mobile, web and kiosk, holding all three surfaces to one visual language and cutting handoff back-and-forth with engineering.

Turkeyana Clinic / Extratik

02/2021 – 09/2022

UX/UI Designer · Istanbul

Docnmore — global digital health platform

- Designed the full **patient-provider journey**: clinician discovery, online and in-clinic booking, and secure video/chat consultations for an international patient base.
- Shipped tools for **medical records, health history and prescription reminders** — high-stakes clinical data made legible to non-expert patients.
- Delivered the **clinic-side dashboard** for real-time appointment flow and patient profiles, replacing manual scheduling for partner clinics.

EDUCATION

BSc, Computer Engineering

Fatih Sultan Mehmet Vakıf
University
2012 – 2019

15+ UX Certificates

Interaction Design Foundation
2019 – Present

EXPERIENCE (CONT.)

Altosis Information Technologies

02/2019 – 07/2020

UX/UI Designer · Istanbul

Custom client solutions on a proprietary BaaS platform

- **Led interface design** for websites, admin panels and mobile apps across a rolling portfolio of client projects, from kickoff to developer handoff.
- Designed for **Teknosa, Monster Notebook and Türk Telekom**, working inside each client's established brand system rather than imposing one.
- Owned the full cycle: requirement gathering, high-fidelity wireframes, interactive prototypes, and responsive UI across platforms.
- Managed the client revision cycle, translating vague business asks into decisions the team could design and build against.

Milk Lab34

06/2016 – 05/2017

UX/UI Designer · Istanbul

Kidofun — children's activity booking app

- Designed the parent-facing booking experience end to end, from discovery to paid confirmation.
- Built the **search and filtering model** (age group, interest, location) that narrowed hundreds of activities to a relevant handful in a few taps.
- Designed secure in-app payment, booking history and planning flows.

Independent / Freelance

2015 – Present

Product Designer & Design Systems Consultant

- **Freelancing since 2015**, alongside full-time roles: design consultancy and end-to-end product design for mobile apps, web apps, dashboards and marketing sites, working with startups and agencies across sectors.
- Usually the **only designer on the engagement** — scoping the problem with founders, then owning discovery, information architecture, wireframes, high-fidelity UI, prototypes and developer handoff.
- Hand off **production-ready specs** — states, breakpoints, tokens and annotated behaviour — and stay available through the build; comfortable enough in HTML/CSS to resolve implementation questions directly.
- **Since 08/2025, freelancing full time** while building **Xyroxia**, a **design system builder** — a web app for generating token architecture, type scales and component libraries, and auditing them for accessibility. The AI layer is deliberately thin and runs on the user's own API key. Work in progress at vburakkeles.com.
- **UX Guide** — a self-published handbook covering 108 UX/UI terms across 12 chapters, with original illustrations and cited academic sources; written in English and published free to read.
